Subject: Olin Chemical Superfund Site in Wilmington, MA

Dear Melanie,

Please find my comment to the EPA regarding the proposed cleanup plan for the Olin Chemical Superfund Site in Wilmington, MA below.

In my opinion, identification and characterization of other Nitrosamine contaminants besides NDMA in the DAPL pool will be critical to successful remediation of the Olin Chemical Superfund site in Wilmington for safe usage by future generations. Please accept the offer of the MIT SRP members to aid the EPA in further characterizing the contaminants present at this site to enable more complete treatment during the cleanup efforts.

Thank you for your time.

Best regards,
Amanda
